

## OMEGA™ Charge Management System Focus on Telematics Integration

AMPLY Power's CMS provides everything a fleet operator needs to ensure reliable and cost-efficient fueling of their electric fleet, including seamless telematics integration.

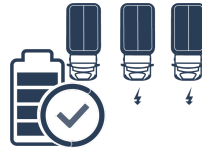

OMEGA™ is a cloud-based platform that is built on a standards-based framework and supports all types of electric vehicles, EV charging stations, and vehicle telematics systems. By integrating telematics with OMEGA™, additional features are unlocked that reduce risk and improve operational performance.

## Features of OMEGA™ with Integrated Vehicle Telematics

### Battery Preconditioning

Increase charging speeds and improve a vehicle's useful life by warming up the battery before it is plugged in.

### Guaranteed State-of-Charge

Track the vehicle's state-of-charge to ensure it will be ready to go at the start of each shift.

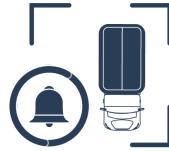

### Integrated Scheduling

Adaptable scheduling based on vehicle progression on planned routes and charging needs.

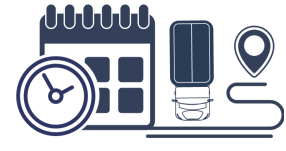

### Enhanced Charger-Vehicle Communication

Ensure each vehicle is getting the charging support they need based on unique vehicle characteristics, prolonging battery life.

### Intelligent Notifications & Monitoring

Real-time alerts that maximize vehicle uptime, enable preventative maintenance, and improve operational efficiency.

### Vehicle Locator & Tracker

Know when vehicles are returning to the depot and charging schedules will be adjusted accordingly.

### Data Ownership

*AMPLY Power understands that a fleet's routes are confidential and may contain trade secrets.*

*AMPLY Power does not claim any ownership of telematics data, beyond a usage license to improve your electric fleet fueling experience (and no one else's).*
